## **MSA 8200 Predictive Analytics**

#### **Class Information:**

Location: Room 306, GSU Buckhead Campus. Website: iCollege http://icollege.gsu.edu

Prerequisites: MSA8190, or consent of the instructor.

You will need to be familiar with statistical programming environments. We will rely on R

for the coursework. http://www.r-project.org.

#### **Instructor Information:**

Yichen Cheng @ Room 333, GSU Buckhead Campus.

Office hours:

Monday: 1:30 pm – 3:00 pm Wednesday: 4:30 pm – 6:00 pm

Email: ycheng11@gsu.edu

## **Course Descriptions:**

This course introduces students to different predictive models with a focus on real-world applications and datasets. The course covers three primary topics: 1) the analyses of time series data, including estimation and inference for ARIMA models as well as more recent developments; 2) a collection of other important models including Bayesian analyses, survival analyses, models for count data; 3) the set of skills required to analysis real world data, including data pre-processing, data type identification, and different types of models for different data type. In addition, the students will also have hand on experience of working with real world data.

### **Textbooks:**

- [S] Shumway, R.H. and Stoffer D.S., Time Series Analysis and Its Applications. Fourth Edition. Springer.
- [K] Kleiber, C., Zeileis, A., Applied Econometrics with R. Springer.
- [P] Class notes will be posted on iCollege.

### **Other Useful References:**

- [R] <a href="https://www.econometrics-with-r.org/">https://www.econometrics-with-r.org/</a>
- [E] The elements of statistical learning: <a href="https://web.stanford.edu/~hastie/Papers/ESLII.pdf">https://web.stanford.edu/~hastie/Papers/ESLII.pdf</a>

# **Course Learning Outcomes:**

At the end of this course students will be able to:

- 1. Understand different data types and identify the correct model for data analysis.
- 2. Model and forecast time series data.
- 3. Deal with messy data that has missingness or censored observations.
- 4. Feel comfortable with analyzing real world data set and providing business insights.

### **Methods of Instruction:**

The material will be presented in lecture form. As a general approach, I first discuss models and methods conceptually, and I then provide and discuss a variety of example problems/programs that illustrate the concepts.

## **Attendance Policy:**

Attendance is not formally taken. However, it is strongly suggested that students do not miss class as most students will have difficulties completing the assignments without attending the lectures.

#### Homework

There will be homework assignments to clarify and deepen concepts. Homework assignments will be posted on iCollege. All homework assignments must be hand in at the beginning of the class.

You may discuss the assignments among each other, but every student has to write up the assignment on her/his own. Students copying from their classmates and the student who let others copy from her/his assignment will receive a zero score for the corresponding homework or possibly the ENTIRE course.

### Exam:

The mid-term exam will be closed book. You may bring a one-sided  $8.5 \times 11^{\prime\prime}$  (A4) sheet of paper.

# **Course Project:**

There are two projects for the course: one mini project and one final project. Students will form into groups of 3-4 people and work on the projects. The same group should work on both the mini project and the final project.

Mini project: A list of the mini project topic will be posted on icollege. Each group will sign up for a different topic. The basic requirement is to follow the analyses in the materials provided. Each team will have 15 mins to present their work (10 mins presentation + 5 mins Q&A). The presentation should address the following items: 1. What was done? 2. Why you do it this way? 3. Are there other better alternatives? The presentation will be evaluated by: 1. Quality of the analyses. 2. The presentation skills. 3. The Q&A session.

<u>Final project:</u> Each team will formulate a problem about predictive analytics and discuss the idea with the instructor by Week 10. Each team will have 25 mins to present their work (20 mins presentation + 5 mins Q&A). The presentation should address the following items: 1. Problem Statement. 2. Different approaches you have tried. 3. Conclusions and business insights. The presentation will be evaluated using similar criteria as the mini project.

## **Grading:**

Quizzes	15%
Homework	15%
Mini project	10%
Midterm	30%
Final project	30%

### The anticipated grading scales for this class is as follows:

A+	Α	A-	B+	В	B-	C+	С	C-	D+	D	F
98	95	90	85	80	75	70	65	60	55	50	<50

Please advise the instructor if you have a documented disability that needs to be accommodated.

As members of the academic community, students are expected to recognize and uphold standards of intellectual and academic integrity. See the University's policy on Academic Honesty (Section 409, http://www2.gsu.edu/~wwwfhb/sec409.html) for details. Accommodations for students with disabilities: Georgia State University complies with Section 504 of the Rehabilitation Act and the Americans with Disabilities Act. Students with disabilities who seek academic accommodations must first take appropriate documentation to the Office of Disability Services locate in Suite 230 of the New Student Center.

# **Detailed Outline of the class:**

<u>Date</u>	<u>Topics</u>	References	<u>Readings</u>	<u>Due</u>
Week 1	Introduction of time			
1/15/2020	series models ACF		https://www.analyticsvidhya.com/blog/201	
1/13/2020	Stationary process	[S] Ch 1-3	6/02/time-series-forecasting-codes-python/	
Week 2	AR models		https://www.analyticsvidhya.com/blog/201 5/12/complete-tutorial-time-series-	
1/22/2020	7.ii. iiiodeis	[S] Ch 3	modeling/	
Week 3	Quiz 1			
1/29/2020	MA model	101 01- 0	http://r-statistics.co/Time-Series-Analysis-	1044
	PACF	[S] Ch 3	With-R.html	HW1
Week 4	ARIMA model		https://www.analyticsvidhya.com/blog/201 8/10/predicting-stock-price-machine-	
2/5/2020		101 01 0	learningnd-deep-learning-techniques-	
	Alternative ways?	[S] Ch 3	python/	

	Regression with time			
Week 5	series data.			
2/12/2020	Case Study: Sales		https://rpubs.com/spillai/walmart store sal	
	prediction	[K] Ch 3.5	<u>es forecast</u>	HW2
	Quiz 2			
Week 6	Bayesian analysis			
2/19/2020	Mini projects overview	[E] Ch 8.3		
	Review session	[P]		
Week 7				
2/26/2020	Midterm			
Week 8	Omitted variable bias Panel data			
3/4/2020	Fixed effect model Random effect model	[R] Ch 6,10		
	Diff in diff model	[P]		
Week 9	Mini project			
3/11/2020	Presentation Guest speaker			HW3
Week 10			https://corporatefinanceinstitute.com/resou	
3/18/2020	Regression models for		rces/knowledge/other/poisson-distribution/ https://bookdown.org/roback/bookdown-	
3/10/2020	count data	[K] Ch 5.3	bysh/ch-poissonreg.html	
Week 11	Dimension reduction:			
4/1/2020	linear and nonlinear			
	methods.	[P]		HW4
W. 1 12	Predicting arrivals:	[E] OL 44.0	https://blog.exploratory.io/introduction-to- survival-analysis-part-1-survival-curve-	
Week 12	Survival analysis,	[E] Ch 14.6, 14.8	9364ea642114	
4/8/2020	Censored dependent variables	[P]	https://www.emilyzabor.com/tutorials/survival_analysis_in_r_tutorial.html	
	Quiz 3			
Week 13	Graph analytics,			
4/15/2020	PageRank, etc.	[E] Ch 14.10		
	Final presentation part I	[P]		HW5

	Week 14			
ŀ	4/22/2020	Final presentation part II		

Note that this course syllabus provides a general plan for the course; deviations may be necessary.
